

MessageSolution Exhibits Advanced E-Discovery Multi-Tenant Suite for Managed Service Provider Partners at HostingCon 2010

Austin, Texas, and Silicon Valley, CA, July 20, 2010 -- MessageSolution, Inc., the global technology leader in email, SharePoint, and file systems on-premise and Software as a Service (SaaS) archiving for electronic discovery, litigation support, compliance, storage management, and email server migrations, today exhibits advanced e-discovery multi-tenant suite for managed service provider (MSP) partners at HostingCon 2010 in Austin, Texas.

MessageSolution's multi-tenant MSP solution is taking on rapid growth around the world, with implementations in over 30 countries. Its newly released advanced e-discovery function set includes high-speed Concept Search to cull down the amount of documents to be reviewed and an "intelli-search" for highly sensitive information, such as numbers for credit cards, social security IDs, patient IDs, and drivers' licenses.

MessageSolution precisely locates sensitive information on an on-demand or scheduled basis before automatically classifying and redacting sensitive information. Legal counsels can then promptly submit case-relevant records to the opposing legal team or court records without exposing highly sensitive information. This enables organizations to comply with strict privacy laws while addressing various regulatory compliance requirements.

"From enterprise customers with tens of thousands of users to SME clients like dozens of brokers' houses, today's MSP partner's clients around the world are encountering increasing demand for electronic data discovery for litigation support or various auditing mandates," said Kevin Mcinerney, Marketing Strategist at MessageSolution, Inc. "MessageSolution's newly available advanced e-discovery functions for the MSP-hosted, multi-tenant solution helps enterprises as well as SME clients effectively meet their e-discovery requirements."

A leading innovator in the e-discovery and live archiving space, MessageSolution is the first e-discovery and archiving vendor to deliver a packaged multi-tenant solution that is deployed in MSP partners' data centers. As a technology provider supporting MSP partners' software services, MessageSolution works closely with email server publishers such as Microsoft, IBM, Novell, Linux email server manufacturers, SaaS backup solution providers, and gateway security service providers to offer a multi-tenant e-discovery and archiving solution to hosting and managed service provider partners around the world. MessageSolution's multi-tenant e-discovery/archiving solution is available for full line of email servers and

services such as Exchange, Lotus Notes Domino, Novell Groupwise, WebEX Mail, Google Mail, Zimbra, Postfix, Scalix, etc.

MessageSolution's migration system can help enterprises to quickly migrate from Novell GroupWise and IBM Lotus Notes Domino servers to a Microsoft Exchange Server environment, with a high performance PST file import utility to automate the importation process to Exchange 2010.

MessageSolution's turn-key multi-tenant e-discovery/archiving solution delivers high availability (HA), full redundancy, auto-failover, record keeping scalability, and high performance. MessageSolution software helps MSP partners effectively leverage their existing data center and managed service infrastructure to generate additional revenue and meet their global clients' e-discovery and archiving needs.

As a technology provider for MSP partners, MessageSolution will be exhibiting among leading SaaS vendors such as VeriSign, Microsoft, IBM, etc in the main exhibition area at booth# 245 during HostingCon 2010, from July 20th through 22th at the Austin Convention Center, Austin Texas.

About MessageSolution, Inc.

MessageSolution is the global technology leader in email, file systems, and SharePoint archiving for electronic discovery, compliance, content storage management, and email server migrations. With products and services delivered both on-premise and as Software as a Service (SaaS), MessageSolution enables organizations to mitigate risk, reduce costs and storage requirements, optimize server performance, and comply with industry and federal regulations. Based in Silicon Valley, California, MessageSolution maintains operations in North America, Europe, and Mainland China, along with distribution channels in Europe, Africa, Australia, and Asia Pacific.

MessageSolution Enterprise Email Archive, Enterprise File Archive, Enterprise SharePoint Archive, and Enterprise Migration System are on-premise solutions and Software as a Service (SaaS) archiving services implemented for organizations across all industries, including finance, health care, education, manufacturing, government agencies and non-profit organizations worldwide. MessageSolution software frees IT administrators from daily maintenance and increases overall employee productivity. For more information, visit <http://www.MessageSolution.com>.

MessageSolution is actively working with partners around the world to work with global clients of all sizes. Please visit our web site for more information on the Global Partner Network Program.

What Differentiates MessageSolution Products

On-premise and SaaS customers continually emphasize MessageSolution products' excellent overall performance, support of all major email servers, and ease of use combined with a rich feature set. MessageSolution provides sub-second data retrieval, an intuitive interface, and ease of deployment and maintenance. MessageSolution's intelligent back-end design significantly reduces installation requirements, backup time, and the need for technical support.

MessageSolution Enterprise Email Archive™ deftly manages petabytes of data daily, a powerful enterprise archiving solution. Electronic discovery and litigation support are empowered by the archive's built-in search engine, which searches through millions of emails within seconds across global locations and data centers. Users can access their archive through their email client, browser, or BlackBerry.

As MessageSolution's on-premise, SaaS and Hybrid Archiving supports all major email servers, including Novell Groupwise Server, Microsoft Exchange Server, IBM Lotus Domino Server, Scalix, Kerio, Postfix, Postpath, Zimbra, Imail, Qmail, Sendmail, MDAemon and Sun server, etc., as well as delivering archiving for SharePoint, and for file systems on NST/NFS/NSS/Netware. MessageSolution Enterprise Archive Suite is also the first archiving solution and service in the market to simultaneously cross-support archiving for all compatible mail servers.

In the first quarter of 2009, MessageSolution became the first archiving vendor in the market to deliver a true 64-bit application that runs on a 64-bit OS machine. In November 2009, MessageSolution delivered the first e-discovery and archiving solution with full Exchange 2010 Web Services Integration.

MessageSolution delivers the industry's highest enterprise-class scalability and holds the industry record of archiving tens of thousands of users on one single MessageSolution archive server, 5-8 times over competitions. Competitive vendors archive on average 3,000-5,000 users on a single archive server, much less than MessageSolution archiving system's scalability and flexibility. A high in-process compression rate combined with Single Instance Storage (SIS) de-duplication of message, attachment and file archiving slows archive storage growth.

MessageSolution Enterprise Archive Suite™ further reduces organizations' storage costs by using only 25-30% of the original mail server storage space for live content archiving. MessageSolution's products support all Latin-based languages, as well as all character-based languages, such as Japanese and Chinese.
