MessageSolution Features its Leading Edge Cloud Integration for MSP Partners at HostingCon 2012

MessageSolution will be exhibiting its award-winning managed service provider and internet service provider hosted and enterprise on-premise platforms at HostingCon 2012 in Boston, Massachusetts. MessageSolution supports and integrates with market leading cloud infrastructure providers including Amazon EC2 Cloud Network, IBM SmartCloud, HP-Cloud, and OpSource Cloud.

Boston, MA and Milpitas, CA (July 17, 2012)

MessageSolution, Inc., the global technology leader in enterprise information archiving & eDiscovery solutions, showcases its enterprise legal discovery, information archiving and migration solutions at HostingCon 2012 during July 17-19, 2012.

Working with global service providers, MessageSolution has deployed its industry leading Multi-Tenant and Dedicated- Hosting Archiving Platforms for managed service providers (MSP) around the world. The MSP platform is integrated with Archive Data Replication (ADR)- a comprehensive, automated real-time disaster recovery solution. Archive Data Replication enables duplication of every archived email to a remote server at a DR site that can be immediately accessed and searched, providing a continuity of email management and information immediacy for disaster recovery.

"We are pleased to provide managed service providers a disaster recovery capability that adds a profound leap in continuous data protection service to our leading-edge multi-tenant archiving platform to offer to their client base," stated Kevin McInerny, Global Marketing Strategist at MessageSolution. "This, alongside the cloud integration support gives MSP partners and their clients a competitive edge".

MessageSolution is the only vendor that delivers 3 award-winning archiving and eDiscovery platforms- an on-premise solution for companies that prefer an MSP hosted platform, a cloud computing hosted service for organizations of all sizes, and an MSP platform paving the way for MSP partners to host and manage their own clients. The international program includes managed service providers, internet service providers (ISP), and value added resellers (VAR). More and more partners choose MessageSolution for their deployment flexibility and an extensive revenue opportunity within the archiving and eDiscovery market.

Archive Data Replication is built on Copy-on-Write continuous data protection technology that automatically duplicates each archived email to a remote server in a DR site, providing immediate access to the replicated data on the DR site for retrieval and search, meeting the challenges of rigorous legal discovery and compliance requirements in the event of the primary archiving system or data center being down.

MessageSolution offers a duality of cloud environments for SME and enterprises. MessageSolution Cloud Computing Platform can also be hosted by managed service providers to build and brand in the MSP's own network to leverage the established datacenter or cloud infrastructure. MessageSolution's private cloud solution delivers a complete suite of email, SharePoint and file archiving systems, in addition to legal discovery and multiple case management functionalities.

Enterprise SharePoint Archiving and eDiscovery Platform for both on-premise SharePoint servers and MOSS setting: MessageSolution SharePoint Management Solution is integrated with Microsoft RBS and EBS protocol ensuring 100% SharePoint performance. Clients across all industries implement MessageSolution to enhance

internal performance and storage management. In addition to on-premise enterprise solutions deployed on the clients' site, MessageSolution

enterprise email archiving and eDiscovery platforms are integrated with Amazon EC2, OpSource Cloud (for its newly launched datacenter locations in Australia), HP Cloud, IBM SmartCloud for Exchange, Domino, GroupWise, and all Linux-based email environments. MessageSolution hosted cloud archiving allows businesses to implement a best-of-breed archiving eDiscovery solution in record time with minimal upfront costs and comprehensive enterprise features.

 "We're excited to work with a growing number of global Microsoft partners to support their clients around the world for their email and data archiving for compliance, legal discovery, and storage management." said McInerney. "MessageSolution's architecture is designed for online global deployment with minimum engineering support and easy to deploy, which helped MessageSolution's technology being deployed at its fastest growth rate in the market today, both on-premise and in the cloud".

MessageSolution will be exhibiting at HostingCon 2012, Booth #808 at the Boston Convention Center, July 17-19, 2012, Boston, MA.
