Q2 2012

MessageSolution — Global Technology Leader in Enterprise Information Archiving and eDiscovery

MessageSolution Enterprise Information Archiving & eDiscovery for HIPAA Compliance

We begin **Q2 2012** by highlighting some advanced features of our award-winning MessageSolution Enterprise Information Archiving and eDiscovery Suite specifically for the healthcare industry. As a priority policy affecting administrators everywhere, **The Health Insurance Portability and Accountability Act** (HIPAA) establishes national standards for electronic health care transactions, doctor-patient interactions and sensitive information. HIPAA was implemented in 1996 to secure the privacy, accessibility and security of patient information and electronic communications. MessageSolution Enterprise Email Archive (EEA) automates HIPAA compliance regulation policies, allowing administrators and legal counsel alike to access protected data.

Privacy
HIPAA requires that patient information like billing, personal information, and private health information like social security number, credit card number, birth date be kept strictly confidential. Sensitive patient information must still be protected when produced and presented in electronic format by court order.

MessageSolution Enterprise Email Archive protects sensitive patient information such as social security numbers or credit card numbers with configurable **Data Redaction** for all archived mail. Permitted users can view and access messages and emails according to specific job function, without compromising the integrity of the original email.

Retention
HIPAA also requires that all electronic communications be retained for no less than seven years. MessageSolution EEA offers configurable automated retention policies that can be configured company-wide, by user or by user group.

Data Integrity
A HIPAA compliant organization must ensure that "data or information have not been altered or destroyed" (HIPAA Security Rule at § 164.304). By leveraging hash-code technology, EEA can make certain that all archived data is unalterable. To ensure maximum security, an unavoidable deletion log records every deletion instance to prevent premature deletions.

Controlled Access
HIPAA mandates that all electronic information is safeguarded against unauthorized access. MessageSolution Enterprise Email Archiving allows granular access permission to be configured by individual user or user-group. Supervisee access can also be configured for auditors or legal counsel to access information. Automated search and access logs also document the chain of custody of all archived data to ensure the highest security access logs.
