MessageSolution Showcases Managed Service Provider Archiving, eDiscovery and Cloud Computing Platforms at Microsoft Hosting Summit 2012

MessageSolution, the global technology leader in enterprise information archiving and eDiscovery, will be exhibiting its award-winning MSP Hosted Multi-Tenant platform, cloud computing, and on-premise archiving solutions at Microsoft Hosting Summit 2012 in Bellevue, Washington.

Milpitas, CA and Bellevue, WA (March 26, 2012): MessageSolution, Inc.
The global technology leader in enterprise email, File Systems, SharePoint archiving and electronic discovery, will be showcasing its award-winning technologies at the invitation-only Microsoft Hosting Summit 2012 in Bellevue, Washington (March 27-29, 2012).

MessageSolution delivers both Cloud-based and on-premise solutions for enterprise and SME clients, in addition to serving hosting needs of Managed Service Providers (MSP) to provide for multi-tenants on a single server. MessageSolution Multi-Tenant Archiving Platform allows managed service provider to build a centralized archiving platform on a cost-effective, single hardware configuration to archive for multiple companies with separated individual archives and administration roles.

"Our innovative products have been successfully deployed worldwide and MessageSolution technologies continue to pioneer the archiving and eDiscovery industry. Our proficiency provides multiple archives for hundreds of SME organizations on a single server system," said Kevin McInerney, MessageSolution Global Strategist. "With our industry leading scalability, we are able to offer the MSP partners the opportunities to archive thousands of users from hundreds of different companies on a single archiving system, or hundreds of thousands of users and more with a clustered archiving platform."

As a first in the market to offer hosted *and* cloud based solutions, MessageSolution Multi-Tenant Archiving & eDiscovery Platform is an industry-leading packaged software solution to be deployed into hosting partners' datacenters around the world. MessageSolution assists MSP partners to maximize partners' expertise in providing managed service by increasing service offering, optimizing profitability, and improving client retention. MessageSolution's technologies give MSPs the option to host multi-tenants on a server, or to manage a dedicated private cloud. Managed service providers who are using the award-winning Archiving & eDiscovery technologies include email hosting firms, online backup solution providers, Cloud storage service providers, IT consultants, ISPs and system integrators.

Also featured at the Microsoft Summit will be MessageSolution Archive Data Replication, which provides continuous data protection technology that automatically duplicates each archived email to a remote server in a DR site. The solution is built on Copy-on-Write, allowing immediate access to data and information to meet the challenges of rigorous legal discovery and compliance requirements in the event of the primary archiving system or data center being down.

"In addition to the all-in-one enterprise solution, we also deliver dedicated-hosting platforms so that MSPs can host enterprise and mid-market clients on a private cloud, combining business flexibility, scalability and technical quality," McInerney concluded.

MessageSolution will be exhibiting its award-winning enterprise information archiving and eDiscovery technologies along with Archive Data Replication for DR to all registered attendees at the Microsoft Hosting Summit 2012 in Bellevue, Washington in Booth # 13 on March 27-29, 2012.

As a Microsoft Gold Partner, MessageSolution's product development team has achieved the following:

- The first full integration with Outlook 2011 Mac in the market
- The first Web Service Protocol Integration with Exchange 2010 for MSP Hosted Platform, On-Premise and Cloud Archiving & eDiscovery implementations
- Providing a complete advanced eDiscovery platform for Exchange 5.5, 2000, 2003, 2007 2010, SharePoint 2003 – 2010, and File Systems
- A complete client integration with Outlook 2000, 2003, 2007 and 2010 for email server storage management, with "0" footprint on Exchange consuming "0" resource on Exchange Server
- The first in the market to provide an enterprise-class application that fully supports Windows Server 2008 64-bit Platform
- The industry's highest enterprise-level scalability and holds the industry record of archiving 25,000 users on one single server

Multi-Tenant Archiving Platform for Microsoft Hosted Exchange

Compatible with Microsoft Multi-Tenant Hosted Exchange, MessageSolution's multi-tenant Archiving Platform allows managed service providers to deliver a centralized archiving system on a cost-effective single hardware configuration with multiple archives and administration roles for organizations with their own individual archives. Leveraging MessageSolution's top industry scalability records, MSP partners are able to archive tens of thousands users on a single server to minimize hardware cost and to efficiently leverage MSP's existing service-hosting capacity and datacenter infrastructure. This allows MSP's to provide a cost-effective yet feature-rich archiving and eDiscovery solution to Small Medium Enterprises (SME) and organizations around the world.

Enterprise Archive for Exchange, File System and SharePoint Governance

In addition to offering the public open cloud solution for SME clients, MessageSolution Cloud Computing Platform, the all-in-one live archiving and eDiscovery solution for email, file systems, SharePoint, Lync server and OCS – is also available for enterprise-class organizations on private cloud (Dedicated-Hosting). MessageSolution Enterprise Email Archive connects to the Exchange server via EWS or CDO to capture and archive email based on the company preferred settings. Emails are captured, compressed and de-duplicated using single instance storage (SIS) prior to being archived. This process reduces the storage requirements of the archiving server by an average of 75%. The real-time mailbox management feature reduces Exchange information storage over 90% by creating a transparent link in the user mailbox— the storage management function benefits both clients' Exchange servers and MSP's data center operations.

MessageSolution SharePoint Archiving and Management Solution is built strictly on Microsoft EBS and RBS protocols. The Enterprise SharePoint and File System Archives are built in the same UI with the email archiving system and built onto the same hardware server configuration. This provides the system administrator with a conveniently centralized administration console to manage and operate all email, file document and SharePoint archiving and eDiscovery tasks. The end user is able to conveniently review and search his/her own personal archive for email, file and SharePoint file with one UI.

By integrating award-winning enterprise archiving policy with SharePoint's record center functions, MessageSolution has created a framework to automate eDiscovery and manage risk in SharePoint distributed farms. Now SharePoint administrators can regulate compliance, remotely offload Blobs to optimize SharePoint storage space and server performance, as well as search and restore objects instantly without the need for additional IT assistance.

Enterprise eDiscovery Litigation Support Platform for Email, File System, and SharePoint

MessageSolution eDiscovery Platform key features include: Case Management, Early Case Assessment, Culling, Legal Review, Litigation Hold Notification, Collaboration and Data Redaction. The eDiscovery Platform is fully integrated with MessageSolution Enterprise Archive, which pinpoints, captures and retrieves email, files, SharePoint files on or offline for live court presentation or deposition process, and places Litigation Hold on all archived emails and file documents throughout entire organization. MessageSolution eDiscovery Suite streamlines data collection for email and file from Exchange, File servers and SharePoint environments for processing, analysis, cull-down, and review phases of eDiscovery for legal cases. Legal team uses the eDiscovery system's culling capabilities to prune large datasets to much smaller and more relevant ones.

Legal counsel and corporate compliance officer can also utilize the built-in Data Redaction function to fully prepare organizations for further document processing in a legal proceeding, to enable organizations to meet civil litigation process, HIPAA, PHI, PHI and PCI-DSS compliance requirements for custodians' privacy protection and to activate an automated leak-prevention protocol for corporate intelligence protection in an external audit process. MessageSolution is the only archiving provider to offer a Data Redaction function in its email archiving solution. Other market archiving providers still need to partner with a separate eDiscovery vendor to offer a data redaction solution, which raises costs without refining efficiency. With MessageSolution, the eDiscovery Data Redaction provides a streamlined solution performance and technical support all within one solution for HIPAA, PCI compliance, etc.

The MessageSolution Difference

Customers continually emphasize MessageSolution products' excellent overall performance, support of all major email servers, and ease of use. MessageSolution provides sub-second data retrieval, an intuitive interface with federated search capabilities, and ease of deployment and maintenance. MessageSolution's intelligent back-end design significantly reduces installation requirements, backup time, and the need for technical support.

MessageSolution Enterprise Email Archive™ is a powerful enterprise archiving solution, deftly managing petabytes of data on a daily basis. Legal eDiscovery and litigation support are empowered by the archive's built-in search engine, which searches through millions of emails within seconds across global locations and data centers. Users can access their archive through their email client,

browser, or BlackBerry. Enterprise Email Archive™ further reduces organizations' storage costs by using only 25% of the original mail server storage space for live content archiving. MessageSolution's products support all Latin-based languages, as well as all character-based languages, such as Japanese and Chinese.

About MessageSolution, Inc.

MessageSolution, Inc., an industry leader in email, file and SharePoint archiving, eDiscovery and bi-directional migration, has spent years developing working solutions to real-world, industry concerns. With Cloud, Multi-Tenant and On-Premise solutions available, MessageSolution enables organizations of all sizes from all walks of life to mitigate risk, reduce storage costs and requirements, optimize server performance, and comply with industry and federal regulations. MessageSolution Enterprise Archiving and eDiscovery Platform supplies the organizational and governing backbone to manage the lifecycle of electronic stored data (ESI) by fully integrating with all aspects of the Lotus Notes, Exchange, GroupWise and more. It automatically archives all email, email attachments, files and all SharePoint/Quickr content types and permissions to the instantly-accessible, archiving server to optimize the Email server capabilities. These integrations also make federated searches available from one user-friendly interface.

Based in Silicon Valley, California, MessageSolution maintains operations in North America, Europe, and Mainland China, along with distribution channels in Europe, Asia Pacific, Africa, Australia, South America & the Middle East.
